

Ayturgan Karagulova

Python-first product engineer building web products, APIs, bots, parsing systems, and AI-powered experiences.

I am an AI Fullstack Developer with a programmer-engineer degree and a strong backend foundation. I use AI-assisted workflows to move fast, but I still care about shipping real products: production APIs, payment flows, parsing platforms, Telegram bots, frontend delivery, and experimental game systems with AI NPCs.

POSITIONING

Honest, modern, and product-focused

This resume presents you as someone who can turn ideas into working systems quickly, especially where backend strength, AI tooling, and fast product execution matter.

Since 2022

shipping real products

Python-first

backend mindset

AI + Games

creative side projects

CURRENT FOCUS

What I build best

Python

FastAPI

Django

React

PostgreSQL

Redis

Docker

Nginx

Linux

Parsing

Telegram

Payments

CI/CD

Unreal Engine

EXPERIENCE

Work history

Backend-heavy product work with fullstack execution when the product needs it.

Middle Python Developer

.beam

COMPANY

Jun 2025 - Present

- Develop and support production projects, websites, backend services, and server environments across

STACK

Skills and strengths

Strongest where backend, integrations, shipping speed, and product thinking meet.

CORE STACK

Python

FastAPI

Django

JavaScript

TypeScript

React

REST API

INFRA AND DATA

several products.

- Extended a large API-driven service for ordering special equipment through a mobile app, covering marketplace-like logic for machinery, drivers, and truck transport workflows.
- Built a QR payment intermediary website from scratch to simplify commission-free payments through interbank QR transfer flows.
- Built a large real estate aggregation platform from scratch with multi-source parsing and a feed of the latest listings from multiple websites.

Python Developer

Photo Studio

PRODUCT

Nov 2024 - Apr 2025

- Developed a Telegram bot for photo processing focused on appearance enhancement, filters, and document-ready formatting.
- Worked on image processing logic and product delivery for a practical, user-facing automation workflow.
- Used Python tooling around bot flows, media processing, and backend persistence.

Middle Fullstack Developer

ZuloCoin

REMOTE

Jun 2023 - Aug 2024

- Developed a Telegram crypto game and Mini App with full client-server logic and a React-based frontend.
- Worked across backend, bot logic, product flows, and frontend integration as part of the full development cycle.
- Contributed to a game-like user experience inside the Telegram ecosystem.

Junior Python Developer

Self-employed

FREELANCE

Oct 2022 - May 2023

PostgreSQL

Redis

Docker

Docker Compose

Nginx

Linux

CI/CD

Deploy

BACKGROUND

Education

EDUCATION

Degree

Bachelor's degree,
Programmer Engineer

University

Kyrgyz State Technical
University named after I.
Razzakov

Graduation

2023

Open to roles where Python, backend systems, AI tooling, and fast end-to-end delivery are

- Built REST APIs using FastAPI and Django for client projects and internal tools.
- Created Telegram bots for automation, integrations, and parsing tasks.
- Delivered practical backend solutions end-to-end, from implementation to deployment.

valued. Also actively exploring game development and AI character systems in personal work.

PROJECTS

Selected work

A mix of commercial builds, Telegram products, parsing systems, and AI/game experiments.

Second Dawn

AI game prototype in Unreal Engine 5.7 focused on AI-driven NPC interaction. Includes a realtime TypeScript backend, WebSocket communication, structured NPC prompt architecture, short-term memory, and voice pipeline experiments.

Unreal Engine 5.7

TypeScript

WebSockets

Gemini

OpenAI STT

AI NPCs

QR Payment Intermediary

Web product built from scratch to simplify commission-free payments with interbank QR flows and a smoother user path for day-to-day transactions.

Python

Payments

Web

Product

Deploy

Real Estate Aggregator

Large parsing-driven platform that collects the latest property listings from multiple sources and turns them into one searchable, fresh feed.

Parsing

FastAPI

PhotoBeautiBot and ZuloCoin

Telegram-first products spanning photo automation, document-ready formatting, crypto gameplay mechanics, Mini App flows, and fullstack delivery.
